Ft. Walton Beach, Fla– The Florida Department of Health in Okaloosa County (DOH-Okaloosa) conducts bi-weekly saltwater beach water quality monitoring at 11 sites through the Healthy Beaches Monitoring Program. Samples are collected from March through the end of October. The water samples are analyzed for enteric bacteria (enterococci) that normally inhabit the intestinal tract of humans and animals and which may cause human disease, infections, or rashes. The presence of enteric bacteria is an indication of fecal pollution, which may come from stormwater runoff, pets and wildlife, and human sewage.

Health advisory is issued for Lincoln Park in Valparaiso, Liza Jackson Park and Garniers Beach Park in Ft. Walton Beach, and Poquito Park in Shalimar. The health advisories are based on the U.S. Environmental Protection Agency’s recommended standards for enterococci. This should be considered a potential health risk to the bathing public.

If you have questions, contact DOH-Okaloosa at (850) 833-9247 or (850) 689-7859. You can also visit www.HealthyOkaloosa.com and click the “[Healthy Beaches](#)” link to be taken to a list of Okaloosa County’s Healthy Beaches sites, sampling results and maps.

About the Florida Department of Health

The Department, nationally accredited by the [Public Health Accreditation Board](#), works to protect, promote and improve the health of all people in Florida through integrated state, county and community efforts.
